Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

2. Claims 11-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kori et al. (US 5,778,064).

Regarding claims 11-18, Kori in Fig. 8, discloses and meets the limitations associated with a method for computing system to provide protection of incoming data, the method comprising:

- receiving data of at least one of audio and video; (see Fig. 8, "VBI dec. 51", "A/D 54", "A/D 52", "video signal process 55", "audio signal process 53" etc.);

Art Unit: 2165

- wherein a line of the data includes screen end information, and color burst information (the color burst and screen end information are inherent features of a beginning and ending information associated with one line of a video signal, from H-sync to H-sync.; and
- a data access parameter is independent of a source of the data (see col. 7, line 4 to col. 8, line 43, "CGMS information indicates the level of protection, either "bit value 00, not copy protected", "bit value 10 partially copy protected" and "bit value 11 copy protected");
- digitizing (54) independent of the access parameter, once digitized, the data access parameter is lost, prior to enabling a central processing unit (control switches 48, 50 and SW and elements 45, 56, with controllers 42, 43 and 51), to control access to the digital video (to recorder 13);
- prior to enabling a processing unit to access control of the digital video to be recorded, determining whether the data access parameter restricts (Fig. 2 B); and when restricted access is preventing to the digital video without restrictions (Fig. 2 B, invalid for copy operation, bits 7 & 8 are 1/ones s).

Regarding claims 12-14, Kori further meets the limitation of wherein when storing the video in digital memory an embedded data access parameter (Fig. 2 B, "valid for one copy generation") is not included (lost due to D/A conversion, also the original in this case is not included because it is changed to no copy) and preventing from access due to copy restriction.

Claims 15-21 are deemed analyzed and discussed with respect to the claims above.

Further regarding claims 11-21, Kori discloses a various processors for controlling switches and related elements and interpreting restrictions but, fails to disclose a CPU and computer system.

The examiner takes official notice that what has been done in hardware is obvious to be implemented by a computer system

Art Unit: 2165

with CPU and software to perform the same, therefore, it would have been obvious to one skilled in the art at the time of the invention to modify Kori by utilizing or replacing the hardware processors with a CPU/computer system and software, as software lends itself to be updated and re-down-loaded, as compared to hardware modifications, as is obvious to those skilled in the art.

**Allowable Subject Matter**
